

Develop a python script that showcases the basics learned,demonstrating your understanding of python programming

```
#write a code to assigned a variables
a=2
b=7
c= a+b
print(c)
```

9

```
# write a variable that show 2 variables first_name and last_name
first_name="matafiy"
last_name="aminu"
full_name=first_name+last_name
print(full_name)
```

Matafi yi ami nu

```
#write a code to assigned a variables and display the code
c1=6
c2=4
c3= c1-c2
print(c3)
```

2

```
print(type(c))

<class 'int'>
```

```
print (type(full_name))

<class 'str'>
```

```
print(type(c3))

<class 'int'>
```

Displaying 2 different strings

```
#write a variable to display 2 different string
name ="matafiyi"
address="Takursite"
biodata=(f'{name} {address}')
```

```
print (biodata)
```

Matafiyi Takursite

```
#write a variables to display 2 different string
name="aishh"
course="statistics"
```

```
details=(f'{name} {course}')  
print(details)
```

Matafiyi com

```
print(type(biodata))
```

```
<class 'str'>
```

```
print(type(details))
```

```
<class 'str'>
```
